

I build software end to end, with *a frontend heart.*

A full-stack engineer with 14 years shipping web products. Deepest in frontend — design systems, component APIs and accessibility at scale — and at home across the rest of the stack, from Node and Java to CI/CD.

● Available now for senior roles — based in Madrid, remote or hybrid.

01 EXPERIENCE

2022 — 2026

Mews

Squad Lead — Experience team, Growth tribe

FEB — JUL 2026

Led a cross-functional squad on the experience layer of the PMS: an entirely new product navigation and key upgrades to the assistant search. Built the navigation package behind it — route-active detection, enterprise-scoped links, TanStack Router and Query — as its main author, and rolled it out behind feature flags one surface at a time. Planned the work, ran the ceremonies and mentored junior engineers while remaining the team's main delivery engineer, and introduced AI-assisted workflows and tooling that cut the repetitive work.

Tech Lead — Design System team, DX Platform tribe

JUN 2024 — FEB 2026

Set the technical direction for the design systems behind a large product's UI as their formal code owner: the established library of ~102 components that some 81 packages consume, its new-generation replacement — where I am the top author of the core — and the guest-facing one. The flagship delivery was its DataGrid: filtering, URL-synced state, grouping and accessibility, designed as one component API rather than a screen, and now the default for every data-heavy screen in the product. Owned

components end to end besides, from API design to docs, Storybook and tests — the SideMenu and the useSideMenu hook it exposes serve the PMS and the Events Management System from a single source. And drove a sustained accessibility push across the system: ARIA, keyboard navigation, focus management and screen-reader support, backed by axe-based tests.

Senior Software Engineer — Design System team, DX Platform tribe

DEC 2022 — JUN 2024

Shipped component libraries and frontend tooling for a large React/TypeScript monorepo — over four years I became its third most frequent contributor of 713, across some 717 pull requests. Second human contributor to the multi-brand design-tokens pipeline (Figma → Token Studio → Style Dictionary), where one source of truth drives four brand themes on web and Android. Partnered closely with product engineers, offering hands-on support, and with the Platform Productivity team to improve developer experience across the board.

2021 — 2022

Liferay

Senior Software Engineer, Product

Product engineer on Liferay DXP — the enterprise digital-experience platform — building and shipping rich new features, most notably for the 7.4 release, with React, Clay, portlets and a healthy measure of Java. Beyond the code, I helped shape the roadmap with product owners and improve team workflows with project managers.

2020 — 2021

Docline

Frontend Lead

Led the frontend of a telemedicine platform, taking its Vue codebase to the next level — component reusability, best practices, and large-scale refactors, including introducing an app-wide shared store as the single source of truth for application state. Reviewed architecture, standardised code reviews, fostered a strong team culture, and improved the existing design system across Vue, TS and SCSS.

2018 — 2021

Minsait · Indra

Product Owner & Engineer — Onesait platform website ↗

2020 — 2021

Owned and delivered the main web app promoting Onesait products, bridging engineering and marketing. Led a team of four engineers and one designer, managing multiple stakeholders.

Senior Software Engineer & Consultant — Onesait Design System ↗

2018 — 2020

Main delivery engineer on the Vue.js-based design system, and the go-to reference supporting every product engineering team adopting it.

2018 — 2019

Ironhack

Web Development Instructor

Taught intensive full-stack web development bootcamps. Fast-paced and hands-on — and nothing hones your own fundamentals quite like teaching them to others.

2015 — 2018

Tau Design

Web Development Lead

Led a team of up to six developers at a design-led agency — client-facing work, pitching, and mentoring juniors — delivering marketing and corporate sites, e-commerce stores, and a steady stream of microsites for clients like Edelvives, ECAM, Universidad Autónoma, Mapfre and Telefónica. In a studio that lived and breathed design, the bar was pixel-perfect: high-craft UI, rich interactions, and truly responsive layouts, on a jQuery, PHP and WordPress stack with SCSS and Node tooling.

2012 — 2015

AulaCM

Web Developer & WordPress Instructor

Helped build and maintain the company's main site and the client websites delivered by its agency arm — my first taste of agency work and shipping custom WordPress in PHP. Doubled as the in-house WordPress instructor, teaching plugins, themes, styling and the PHP basics that make it all tick — and learning plenty the honest way myself.

2004 — 2012

A previous life

Film & TV Sound Engineer ↗

A parallel life in sound, from around 2004 — production and post for film and TV. Two Goyas for documentaries, a Berlinale run after three weeks filming with orphans in Kenya, and a good showing at festivals besides; behind the desk, a Pro Tools wizard and Final Cut obsessive fluent in Avalon compressors, Neve preamps and a wall of top-notch mics. With my friend Iván I built lacasaestudio — still alive and thriving — and the instincts stuck: precision, grace under live pressure, reading a room, and tight teamwork.

02 SELECTED WORK

Ensayadero.studio

A web app for musicians: record rehearsals, split them into stems, get MIDI and notation, and build gig playlists — with trimming, EQ and MIDI instruments. In private beta.

Next.js 16 · React 19 · Supabase · Tone.js · wavesurfer · Python — Demucs, Basic Pitch, Omnizart · Docker on Railway

[READ THE CASE STUDY →](#)

Billing engine

A daily billing engine for cash advances: a pure domain core behind a ports-and-adapters seam, with late revenue, daily caps and rejected charges all carried forward by one mechanism.

TypeScript (strict) · Node · Vitest · Ports & adapters · One runtime dependency

[READ THE CASE STUDY →](#)

Radio Perico

A translator that rewrites plain Spanish in the voice of a cycling commentator — retrieval, evaluation, and a 20-part course documenting how it was built.

Python 3.14 · FastAPI · Claude API · pgvector on Supabase · React 19 · Vite · whisper.cpp · Vercel

[READ THE CASE STUDY →](#)

Tartaytantas

The online cake shop for my sister's bakery — a storefront plus a back office to manage products, attributes and orders.

Astro 5 (SSR) · React islands · Supabase — Postgres, Auth, RLS · Snipcart · Playwright · Vercel

[READ THE CASE STUDY →](#)

Triscaideca

A little portfolio for architect friends — a custom back office and a lot of spare-time care.

Nuxt 2 (static) · @nuxt/content · Tailwind · SCSS tokens · Leaflet · Netlify

[READ THE CASE STUDY →](#)

PaellaLab

My private take on Félix Valluguera's paella app and workshop — a rice calculator, evaporation tests and more, as an installable PWA.

Astro 5 · React 19 · Supabase · Groq · Hugging Face · Framer Motion · Radix · PWA · Vercel

[READ THE CASE STUDY →](#)

Carabanchel Creativa

A Mapbox map of Carabanchel's cultural landmarks in Madrid, built with IED (Instituto Europeo de Diseño) — a Strapi back office with the business logic in Node middleware.

React · Redux + sagas · Mapbox GL · Leaflet · Strapi · MongoDB

[READ THE CASE STUDY →](#)

03 CAPABILITIES

Depth in frontend and UI engineering; working range across the whole stack, with AI a natural part of how I build today.

FRONTEND — THE DEPTH

JavaScript · TypeScript
React · Next.js
Vue · Nuxt
Astro
HTML · CSS · SCSS
Performance · Accessibility

UI & UX

Component architecture
Design systems · token architecture
UX collaboration
Documentation · Storybook

ACROSS THE STACK

Node.js · APIs
PHP · WordPress
Java · Liferay
Strapi · Supabase
Docker · Railway
Git · CI/CD

PRACTICE

Code review · standards
Mentoring
Tech & squad leadership
Agile · Product ownership
AI workflows · automation

04 EDUCATION

Security Engineer diplomas — SecureFlag	2022 — 26	Scrum Product Owner — Jerónimo Palacios	2019
Agile Project Management — Udemy	2019	Unit Testing, Jasmine — Indra University	2019

NodeJS Advanced — Indra University	2019	A11y & UX in Web Dev — Indra University	2019
Node Fullstack — Ironhack	2018	Angular 2 — Aepi	2017
Object-Oriented Programming — Aepi	2016	Web Dev: PHP, JS, SQL — Now-e	2012
Sound Engineering — ECAM	2001 — 05	Humanities — UC3M	1998 — 01

Need an engineer who ships end to end — and still sweats the pixels? Let's talk.
